# Creating a single Bullhorn instance:
## Post-acquisition migration to ensure collaboration.

### What was the project that you worked with Kyloe on?

*Following the acquisition of BioTalent by The IN Group (TIG), we engaged with Kyloe to support the migration of BioTalent's Bullhorn instance to our existing TIG Bullhorn.*

*Through data analysis, Kyloe identified what was to be brought across, assisted in mapping BioTalent's fields to the rest of TIG and, in some cases, created new fields to be used.*

### How did the project go?

*The project went really well. It was very important to us that BioTalent felt part of the wider group as quickly as possible. The team at Kyloe were always on hand to answer questions and weekly update calls ensured that we stayed on course for our planned launch.*

*Coupled with our "in-house" experts, we were able to deliver the project with minimal disruption to the rest of the business.*

### How will it impact your business?

*Having all of TIG working off the same database is vital for a collaborative business and will significantly improve reporting and future integrations.*

*"This is my second time working with Kyloe and I can safely say that from their project management through to their data engineering, they are clearly the people to go to for this kind of project.*

*I wouldn't hesitate to work with them again in the future."*

**Ben Clark, IT Functional Lead @ The IN Group**
