

Getting Bullhorn ready for generative AI with Kyløe DataTools

After transitioning from eRecruit to Bullhorn, GDH faced challenges with data cleanup, managing custom objects, and ensuring data quality. Seeking a solution to automate and improve their data, they turned to Kyløe for assistance. Our solution? Kyløe DataTools.

"Kyløe DataTools is essential for getting your data ready for a powerful generative AI solution like Kyløe AI for Bullhorn."

Molly Brasel, Business Analyst @ GDH

Profile: GDH

- Established: 2001
- Region: US
- Industries: All
- Employees: 600+

GDH challenges

- Lack of automation for data cleanup after transitioning from eRecruit to Bullhorn.
- Inability to manage custom objects with existing tools.
- Data quality and hygiene issues were affecting accuracy and system adoption.
- Bullhorn Automation is unable to capture specific data updates.

GDH objectives

- Improve data hygiene and accuracy.
- Automate repetitive data management tasks.
- Expand the capabilities of existing systems to work with custom objects.
- Enhance system adoption and overall data management.

Kyløe DataTools is a perfect 10/10, especially because it can work with custom objects—something that was a game-changer for us. Many of our status changes rely on either notes or specific fields within custom objects, and Kyløe DataTools seamlessly handled tasks that Bullhorn Automation missed.

Results

Kyløe DataTools quickly proved its value for GDH, delivering immediate improvements in data accuracy. With over 80 data updates in place, Kyløe DataTools enhances Bullhorn data quality, allows better targeting for marketing, and streamlines communication processes. GDH's internal teams benefited from improved efficiency, while the company became well-positioned for current AI-driven initiatives.

Kyloe™ DataTools

Unlock the power to mass update your Bullhorn data

Merging dupes and making updates at scale in Bullhorn is no longer costly or time-consuming. Create a database that is ready for AI and automation, plus enhance the value of your reporting.

Kyloe™ DataTools

Key features

DupliKit

Detect and merge duplicate Bullhorn records with confidence

Kyloe DataTools offers the flexibility you need to perform merges in Bullhorn, without compromising your data.

Merge duplicates, your way:

- Choose to automatically or manually merge.
- Use pre-defined rules to identify duplicate records or specify your own weightings.
- Run custom queries to narrow down on values.
- Exclude standard words from company names such as Ltd, Ltd., and limited,.
- Stay in control – you define the master before merging dupes into a single record.
- Choose to merge duplicates individually or as a mass update – up to 1,000 records in one go.
- Automatically scan for duplicates overnight and have a list of master records and potential duplicates ready to approve for merging in the morning.
- Have peace of mind - undo merges within 30 days.

DataCleaner

Easily identify patchy and outdated records

Find useless records so that you can start to complete them or eliminate them from your searches.

The first step in data cleansing:

- Identify records with missing information, such as phone numbers, and create tearsheets including up to 10k records so that you can actively start to complete them...
- ...or choose to exclude them from searches so that you get only the most valuable results
- Run searches that can't be done in current Bullhorn functionality.
- Name and save your searches, and set them to run once or repeatedly, now or later.
- Setup email notifications so that you know when a search is complete.
- Create custom queries to run searches specific to your firm.
- Option to export results as a csv.

DataRules

Automated and ad-hoc bulk data updates to dramatically improve data quality

This quick and easy solution gives you the ability to make changes previously only achievable through time-consuming manual updates, or costly custom updates. Roll-out bulk updates to Bullhorn, quickly and easily to find top talent, maximise job pipeline, improve client care, streamline your workflows and get accurate insights.

- Append or prepend, copy, format, move, nullify, replace substitute, swap and apply maths functions to fields from 25+ entities in Bullhorn.
- Create and save rules with single or multiple actions
- Review results before applying changes
- View the history of updates in date and time order with the ability to revert rules individually or go back to a certain date within a 30-day timeframe.
- Mass update records with no manual work. E.g.:
 - Find and replace field values: Bulk update mailing preference of people you haven't connected within 12 months to 'Opted out'
 - Copy values into other fields: Copy data into fields that third parties / other Bullhorn Marketplace partners can access
 - Move values to other fields: Repurpose a field by moving the existing values
