

## G2V Recruitment Group

### *How Kyloe AI Assist transformed our efficiency*

A case study in recruitment efficiency and consultant empowerment

Established: **2004** Region: **EMEA / US** Industries: **Multi-sector recruitment** Employees: **>500**

### Background

G2V Group is an award-winning group of recruitment specialists that operates within the Technology, Engineering, Life Sciences and Energy industries, as well as in the UK Government Sector and US Construction.

“Kyloe AI Assist for Bullhorn has given our consultants more time back to do the people work that they're good at... rather than the laborious admin.”

### The challenge

Before implementing Kyloe AI Assist, G2V faced several key challenges:

- **Time-consuming manual tasks:** Consultants spent up to 30 minutes summarising complex candidate profiles, creating outreach emails, and translating content for foreign markets.
- **Data security concerns:** Use of public chatbots and third-party AI tools posed significant risks for potential data leaks.
- **Efficiency barriers:** Consultants were spending too much time on administrative tasks rather than focusing on relationship-building with clients and candidates.

### Their AI journey

#### Motivations

G2V had "an AI and automation directive from the board to make sure that we're utilising it as best we can."

Their primary focus was keeping consultants working within Bullhorn rather than using external tools that could compromise data security.

#### Expectations

The company anticipated that Kyloe AI Assist would reduce administrative burdens, allow consultants to focus on relationship-building, and maintain data integrity by keeping everything within the Bullhorn ecosystem.

"Kyloe AI Assist is fully integrated with Bullhorn, which makes it incredibly powerful. Everything works together in one place."

**Matthew Weller - IT / Business Systems Manager at G2V Recruitment Group**

## AI use cases includes:

- **Translation:** Supporting consultants working in foreign markets.
- **Profile summarisation:** Reducing the time to understand, summarise and present complex candidate profiles from 30 minutes to just seconds.
- **Content generation:** Creating job advertisements and outreach emails directly within Bullhorn.
- **Data enrichment:** Ensuring database accuracy and completeness.

## G2V Recruitment Group results

### Increased efficiency

While specific metrics weren't available, consultants reported substantial time savings on administrative tasks, particularly in summarising candidate profiles and creating communications.

### Consultant satisfaction

It's giving consultants more time back to do the people work that they're good at... rather than the laborious admin.

### Data security

By keeping all processes within Bullhorn, G2V has minimised the risks associated with third-party tools, ensuring data integrity and compliance.

## Conclusion

G2V Recruitment's experience demonstrates how Kyloe AI Assist for Bullhorn can help you revolutionise recruitment processes. By automating manual tasks and empowering consultants to focus on relationship-building, our clients are more efficient, increasing consultant capacity, improving job satisfaction, and strengthening their competitive edge in the recruitment industry.
